

Homework 6

CSC-432

Due: 3/7/13

Turn in a 1-2 page summary of the project that you intend to complete for the course. This proposal should include a description of the problem and your proposed solution. Include any links, graphs, tables, equations, and diagrams as needed. Indicate in the proposal the computational tools (Python packages, etc.) that you will use. If you are going to be doing a data-driven model, indicate what data you will use. Be specific. I want to know the data source. This may include how you will obtain the data (e.g., download from the World Bank web site, use Twitter's API, scraping Wikipedia, etc.). Also include somewhere a link to your github account.

Finish this a day early. Go back and read these instructions again. Read your proposal again and edit it for clarity and content.
